# Mini-Bulk system from Univar

# Mini-Bulk system

Your complete solution for the storage and delivery of corrosive chemicals.

Mini-Bulk is a complete storage and delivery solution for corrosive chemicals provided to Univar customers who require less-than-truckload deliveries. Mini-Bulk is a safe, environmentally-friendly, and cost-effective alternative to drums and totes.

Each Mini-Bulk system is custom-fitted to your location and your needs – Univar even provides secondary containment when necessary. Trained, certified Univar Mini-Bulk professionals deliver your product in specialized, Univar-owned delivery trucks.

Installing the Mini-Bulk system at your facility requires no capital outlay: There is no charge for the storage tanks, secondary containment, system maintenance, or installation of the system.

## Mini-Bulk products available

Univar offers a wide selection of processes and performance chemicals delivered via Mini-Bulk. See a sample listing of the Univar products offered in Mini-Bulk below. For the complete product list, please contact your Univar representative.

- > A customized solution to your chemical handling and storage needs, with tanks as small as 200 gallons available
- > Eliminates container deposits, rinse charges, and heel losses
- > Protects your employees: Minimizes their exposure to hazardous materials, and reduces the potential for uncontained spills
- > The system can be located at your point of use – no more moving of drums or totes, and no more wasted space dedicated to container storage
